Skills

Languages Python, C/C++, Java, JavaScript, Scala, Go
Technologies Tornado, NodeJS, Flask, Apache Kafka, Apache Thrift, Android SDK, PostgreSQL, MongoDB
Tools Vim, Bash, Git, IntelliJ, XCode, Visual Studio

Experience

Uber Technologies Inc.

San Francisco, California

SOFTWARE ENGINEERING INTERN - UBER FOR BUSINESS

January - April 2016

- Individually built three platform services responsible for centralized billing and cross data center transactions using **Python Tornado**
- Architected payment transactions services that to scale to **millions of users globally** and to replicate data across multiple data centers
- Employed MVCS design paradigm, Apache Thrift interfaces and polymorphism to support quick implementation of additional payment methods and to maintain a scalable codebase in Uber's service-oriented architecture
- Migrated payment account metadata from PostgreSQL to Schemaless (Uber's scalable datastore); sharded data and built indexes to allow for constant time queries
- Used **Apache Kafka** and **Grafana** for logging and monitoring respectively

Sony Creative Software

Waterloo, Ontario

SOFTWARE ENGINEERING INTERN

May - August 2015

- Worked on Sony Catalyst series of three cross-platform applications for professional video preparation and editing
- Developed APIs for UI components such as context menus used by all three applications; built with **C++** and the **Qt Framework**
- Implemented and debugged a feature which detects and corrects flash bands in media
- Worked with and debugged a large, multi-threaded codebase shared between multiple applications

CrowdSponsor

Waterloo, Ontario

DEVELOPER

February - August 2015

- Built and deployed entire back end for crowdsourcing website for startups using **Python** and the **Django Framework**
- Implemented campaign analytics tool that aggregates and denormalizes data gathered from Facebook and Google APIs about page visitors and contributors
- Developed user registration using Facebook Login as well as single sign-on comment threads with Disqus

Personal Projects

Sunami Music Player

GOOGLE PLAY STORE

- Implemented smart suggestion system for music using a graph of genres generated with the Echo Nest API
- Architected the Android application using asynchronous methods and image caching resulting in a smooth and responsive UX
- Added online music search and streaming using the SoundCloud API

GlassBoard

HACK THE NORTH 2015

- Built augmented reality Google cardboard application that allows users to interact with visual overlays using their hands
- Implemented face and point detection using OpenCV as well as messaging using the Twilio API

Chordi.co

PENNAAPS XII

- Developed web app that procedurally generates music, taught with data from real artists
- Implemented music generation using a feedforward neural network with a training set of chord progressions from popular songs

IntoxicM8

ANGELHACK TORONTO 2015

- Created a service that uses a support vector machine to determine if the user is intoxicated using sensor data from an Android device
- Implemented pipeline to train models for individuals using their weight, size, gender, etc.

Education

University of Waterloo

Waterloo, Ontario

CANDIDATE FOR BACHELOR OF SOFTWARE ENGINEERING

2014 - 2019

- Engineering and Mathematics Dean's Honours List (GPA 4.0/4.0)
